

# • **EVOLUTION<sup>®</sup> X1**

***A hard-working liner  
that's built for speed.***

- Unique oval-shaped barrel
- Low vacuum levels for gentler milking
- Controlled collapse improves stability, limits slippage
- Fast and complete milk-out
- Fits perfectly into stainless steel 06 style shells

# • EVOLUTION<sup>®</sup> X1

**Milks fast while  
keeping it gentle.**

## **Classic design with innovative features.**

When cow comfort is a priority, but you still need a liner that lets you speed up the process, the X1 is reliable and hard-working.

Variation in barrel wall thickness results in a progressive, two-stage controlled collapse designed to reduce slippage and improve udder health.

The tapered barrel opens and closes with less vacuum, and the shorter tube allows better alignment and flow.

**Fits stainless steel 06 style shells**
